HR PRACTICAL TRAINING — DAY 21

Recruitment Tracker and Vacancy Management in Excel

Training Day	Day 21
Project Area	Excel — Recruitment Tracker & Vacancy Management
Workbook Reviewed	HR Training Day 21.xlsx
Sheets Found	Vacancy Master; Recrutment Pipeline; Recuitment Follow-up; Recruitment Summary
Record Type	Review of the workbook submitted in this conversation

Training Objective

Build a recruitment tracking workbook to monitor open vacancies, candidates, interview stages and follow-up actions.

Workbook Submitted

• Vacancy Master: five sample vacancies across HR, IT, Finance, Sales and Marketing, including vacancy counts, hiring manager, opening/closing dates, applications, selections and joins.

• Recruitment Pipeline: eight candidate records with vacancy IDs, departments, applied jobs, current stages, interview information, outcomes, HR remarks and next-action dates.

• Recruitment Follow-up: linked candidate fields and a follow-up status formula intended to identify completed/closed records and follow-up dates.

• Recruitment Summary: metrics for total vacancies, applications, selected candidates, joined candidates, remaining vacancies and open vacancies.

Formulas Used / Intended

• Vacancies Remaining: =D2-J2

• Vacancy Status: =IF(K2=0,"Closed","Open")

• Follow-up Status: nested IF formula to classify completed, closed, due, today or upcoming follow-ups.

• Summary metrics use SUM and COUNTIF to aggregate vacancy and recruitment data.

Quality Review — Fix Before Final Use

• The workbook contains a few spelling inconsistencies in sheet names, such as ‘Recrutment Pipeline’ and ‘Recuitment Follow-up’; standardise these if you want polished file naming.

• The Follow-up Status formula checks for a single space in the date cell (D2=" ") rather than a truly blank cell (D2=""). Update this condition so missing dates are handled correctly.

• The Total Joined summary formula uses J2:J60 while the other vacancy summaries use rows 2:6. This is not necessarily wrong, but a consistent range such as J2:J6 is clearer for this five-vacancy table.

• The submitted workbook’s summary cells contain formulas; calculated results may not appear in every preview until Excel recalculates the workbook.

Outcome

The submitted workbook has the four intended sheets and the main recruitment-tracking structure. The formulas and naming issues listed above should be corrected before treating the workbook as a final polished submission.

Record note: This is a training project using fictional sample data, not a real company recruitment register.
