SALES EXECUTIVE PRACTICAL TRAINING

Day 22 Completion & Workbook Review Report

Training Day	Day 22	Software	Microsoft Excel
Project	Customer Database, Lead Management & Sales Reporting	Submission	Workbook reviewed

Work Submitted

The submitted Excel workbook contains four sheets covering customer records, lead tracking, daily sales, and a summary dashboard. The workbook includes 10 customer records, 10 lead records, and 10 sales records. Formula-based expected revenue, total sales, net sales, and summary metrics have been started.

Worksheet	Data rows (excluding header)	Columns
Customer Database	10	10
Lead Managment	10	10
Daily sales Report	10	11
Sales Summary	7	2

Review Findings — Corrections Recommended

• **1. Worksheet names and headings:** Rename *Lead Managment* to *Lead Management*. Correct spelling in headings such as “Customor Name,” “Leade Stage,” “Estimated Deal value,” “Sals Date,” and “Unit Prise.”

• **2. Customer status consistency:** In Customer Database, one status is typed “Intrested” instead of “Interested.” Correct it so the Sales Summary COUNTIF formula counts interested customers accurately.

• **3. Lead stage consistency:** “Quilified” should be “Qualified.” Use consistent dropdown values for all lead stages, including “Closed Won” and “Closed Lost.”

• **4. Daily Sales Report columns:** The current headers put “Discount” before “Total sale.” The formulas show Total Sales in column H and Discount in column G, so the headings do not match the values. Recommended order: Quantity, Unit Price, Total Sales, Discount, Net Sales, Payment Status. Then update formulas to match the final column order.

• **5. Pending payment formula:** The formula in column K changes its SUMIF ranges from row to row (for example, J2:J11 then J3:J12). This produces inconsistent totals. Calculate pending payments once in the summary using a fixed range, e.g. `=SUMIF(J2:J11,"Pending",I2:I11)`, after confirming the correct Net Sales and Payment Status columns.

• **6. Summary formulas:** The customer/lead counts and sales totals are set up with formulas. After correcting spellings and aligning the Daily Sales Report columns, recheck every summary result. The current Interested Customers formula will miss the misspelled “Intrested” value.

• **7. Data quality:** Check phone numbers for consistent length/format and ensure each customer, lead, and sale row refers to the intended customer.

Practical Skills Demonstrated

• Creating a structured customer database with customer IDs and lead sources.

• Tracking lead stages, estimated deal values, probability, expected revenue, and follow-up dates.

• Using Excel formulas such as multiplication, subtraction, SUM, COUNTA, COUNTIF, and SUMIF.

• Preparing a sales summary from multiple worksheets and reviewing data consistency.

Completion Assessment

Status: Submitted — corrections recommended before final sign-off. The main workbook structure and several formulas are present. The highest-priority fixes are the inconsistent sales column headings/formulas, the pending-payment

formula range, and spelling consistency in status/stage values. Attendance time and attendance photo were not included in the submitted workbook, so they are not recorded in this report.
